SASKATCHEWAN RIVER BASIN

FORECAST OF

STREAMFLOWS AND RESERVOIR LEVELS

November 19, 2026

Date	SOUTH SASKATCHEWAN RIVER				NORTH SASKATCHEWAN RIVER	
	Lake Diefenbaker			Saskatoon	Alberta Border	Prince Albert
	Daily Mean Inflow (m^3/s)	Daily Mean Elevation (m)	Gardiner Dam Daily Mean Outflow (m^3/s)	Daily Mean Flow (m^3/s)	Daily Mean Flow (m^3/s)	Daily Mean Flow (m^3/s)
Nov 20, 2026	133	555.26	130	131	140	165
Nov 21, 2026	140	555.26	130	130	135	166
Nov 22, 2026	146	555.26	130	130	134	166
Nov 23, 2026	144	555.27	130	130	135	167
Nov 24, 2026	140	555.27	130	130	132	166
Nov 25, 2026	136	555.27	130	130	131	164
Nov 26, 2026	131	555.27	130	130	129	160
Nov 27, 2026	126	555.27	130	130	128	161
Nov 28, 2026	123	555.27	130	130	130	160
Nov 29, 2026	121	555.26	130	130	131	159

Date	SASKATCHEWAN RIVER					
	Codette Reservoir			Tobin Lake		Cumberland Lake
	Daily Mean Inflow (m^3/s)	Daily Mean Elevation (m)	Daily Mean Outflow (m^3/s)	Daily Mean Elevation (m)	Daily Mean Outflow (m^3/s)	Daily Mean Elevation (m)
Nov 20, 2026	298	347.49	300	313.59	300	264.91
Nov 21, 2026	297	347.63	250	313.58	300	264.91
Nov 22, 2026	296	347.75	250	313.57	300	264.90
Nov 23, 2026	297	347.70	310	313.56	280	264.90
Nov 24, 2026	296	347.64	310	313.57	280	264.90
Nov 25, 2026	295	347.58	310	313.58	280	264.89
Nov 26, 2026	293	347.53	310	313.58	280	264.89
Nov 27, 2026	292	347.48	310	313.59	280	264.88
Nov 28, 2026	290	347.66	230	313.59	250	264.87
Nov 29, 2026	290	347.84	230	313.58	250	264.86

Notes:

This forecast is a guideline valid at the point of issue and based on operations intended at the time. It also relies upon data which contains inherit uncertainties, and as with all forecasts the uncertainties in the estimates increase the further away from the date of issue. Specific values on specific days may differ due to transient conditions, especially during periods of rapid change.

Flows provided in the table above are mean (average) daily flows. Flows can however be expected to fluctuate during the day, particularly below the reservoirs on the system (Diefenbaker, Codette, and Tobin) where SaskPower adjusts outflows throughout the day to meet the Province's demands for electricity. Immediately below these reservoirs, outflows are generally higher during the daytime period and much lower, or even zero at times, during the overnight period. The timing of these fluctuations will change but the magnitude will decrease with distance downstream of the reservoirs.
