of the authors. However, copies may be made, except  
for resale, for personal or internal use of the client,  
provided the original publication is cited where  
applicable.

These maps are accompanied by a series of cross sections which  
depict the subsurface units along the transects shown on the map.  
The maps and cross sections are representations of the data  
taken from the testholes and wells indicated on the maps. The  
boundaries outline areas in which the aquifer or geologic unit  
is likely to be found. Aquifers and other geologic units may not  
always occur continuously within the areas shown, may not be  
found at a specific site or may occur at elevations other than  
those indicated. Discontinuous water bearing zones may be  
found outside the boundaries shown.
